

Topic # 1

How do I Navigate around the Map?

Scenario: Once I have opened a map, how do I pan and zoom in and out to further investigate features?

Tools to Use: To Zoom:

- Magnifying Glasses (+ or -)
- Roller Ball on your Mouse

To Pan:

- Left Mouse Click

Instructions: To zoom in and out, you can use the zoom buttons located to the left of the search bar. The magnifying glass with the positive button is to zoom in, and the magnifying glass with the negative sign is to zoom out. In addition to these buttons, you can use the roller ball on your mouse to zoom in and out. To pan around the map, simply left click and drag the map until you see the feature you are interested in.

Interpreting the Results: N/A

Additional Comments: If you zoom too far in or out of the map, you can use the refresh button (Circular arrows to the immediate left of the Search Bar) to bring you back to the original extent of the map.
