Topic #9

How can I visualize more than one map layer at a time in order to compare trends?

Scenario: I have two map layers that I want to compare, but am unable to do this directly in Mango Maps. For example, I may want to compare trends in median household income to the location of recent immigrants.

Tools to Use: The Snipping tool to extract the map image into Powerpoint or Word

Instructions: Using the Snipping Tool, copy and paste the layers you are interested in comparing into Powerpoint or Word, placing them side by side for comparison.

Interpreting the Results: N/A

Additional Comments: When using the "Snipping Tool" method of sharing a map, ensure that all important mapping components are included: Legend, Title, Scale, and North Arrow. This may require several 'snips'.

Variations of this Exercise: Use the snipping tool to capture more than just map images. You can also use the Snip tool to export:
- Tables or reports created using the Query Tool
- Tables or reports created using the Proximity Tool
- Graphs or Charts from the Identify Features pop-up
